

## SL<sup>®</sup> paint protection film

**SL<sup>®</sup> paint protection films are special paint protection films to protect paint surfaces in all kinds of vehicles. The possibilities are endless. All car parts such as hoods, door sills, loading edges, bumpers, doors or handholds can be subsequently protected against paint scratches, stone chips and loss of value.**

The transparent paint protection films are also suitable for the protection of smooth surfaces on motorcycles, boats, trucks, caravans, airplanes or sports cars. Craftsmen and leasing vehicles are protected against loss of value.

### Consistency of material

The special surface of the transparent protective films protects also against yellowing. There will be no yellowing on the paint.

SL<sup>®</sup> paint protection films are water proof, UV and weather resistant for sure. Due to their flexibility, the paint protection films are very easy to install on 2D surfaces, based on TPU also on 3D curved surfaces.

By request, SL<sup>®</sup> paint protection films can be removed residue-free. No adhesive residue will remain on the paint.

### Benefits of SL<sup>®</sup> paint protection films at a glance:

- special paint protection films to protect the painted surfaces of vehicles of all kinds
- extremely scratch insensitive surface coating to protect against paint scratches, stone chips and to preserve the value of the vehicles
- high performance / glossy / transparent - crystal clear
- subsequent installation possible even on complex shapes (good handling behavior on edges and welds, bumpers and handholds)
- also suitable for motorcycles, caravans, airplanes, boats and trucks
- SL<sup>®</sup> paint protection films can be removed residue-free

### Film variations:

- SL<sup>®</sup> paint protection film Protect Bond 200: TPU, thickness 200µ, for 2D and 3D curved surfaces
- SL<sup>®</sup> paint protection film Protect Bond 180 Basic: PVC, thickness 180µ, for 2D curved surfaces
